Current Activities

For the period of June 14, 2008 through July 18, 2008, EPA and the ERRS contractor, Environmental Quality Management, returned to the site. Upon arriving at the site, it was noted that the site gate lock had been cut, apparently by scrappers.

Backfill soils along the eastern portion of the site were recontoured so that they did not put additional strain on the chainlink fence which runs along the eastern site boundary.

Additional signs which warn of the presence of industrial chemicals were placed along perimeter fencing.

Finally, work was conducted on the Springfield Belle water treatment system to ensure that it was ready for use at the next site.

Planned Removal Actions

None

Next Steps

Refer site to State of Illinois and U.S. EPA Remedial program for further evaluation.

Key Issues

None
